About me

I'm a software engineer with over fifteen years of experience, mainly focused on **front-end development** but comfortable working across the stack when needed. I like turning complex ideas into simple, intuitive products, and over the years I've helped startups and scaleups bring their platforms to life—leading front-end efforts, shaping product direction, and working closely with design and backend teams.

Lately I've been exploring libraries for AI agents, while continuing to do what I enjoy most: building products that are fast, reliable, and genuinely useful for the people who use them.

Work experience

Latency

Jan '23 - Jul '25

Led the front-end development of an innovative data intelligence platform for private capital markets, built from the ground up. Focused on implementing advanced data search and visualization capabilities, ensured the design and interface met product requirements and user expectations, and coordinated the integration with backend services.

- React
- Typescript
- NextJS
- Mantine
- D3

Augoor

Sep '22 - Jan '23

Contributed to the expansion of an AI-powered tool designed for code repository analysis.

- React
- Typescript
- Material UI
- Zustand

Landbot

Dec '21 - Aug '22

Contributed to the enhancement of a no-code chatbot creation tool, with a specific focus on developing features for subscriptions and payments. My role involved integrating functionalities to improve both the user experience and the tool's efficiency in managing subscriptions and payment processes.

- React
- Typescript

Sequra

Jul '20 - Dec '21

Led the development of a new Progressive Web App (PWA) from the ground up, specifically designed for the finance sector in physical retail environments. This innovative application was tailored to aid cashiers by providing tools for visualizing and simulating financing options, enhancing customer service and transaction efficiency in stores.

- React
- Javascript
- Styled components
- Ant Design

Work experience (2)

Quipu

Oct '18 - Dec '19

Took on the challenge of extending an established billing and treasury Rails application by architecting a completely independent Single Page Application (SPA). This SPA was designed to be seamlessly integrated within the existing framework, with a strong emphasis on sharing and synchronizing session data, thereby improving user experience and application functionality.

- React
- Javascript
- Styled components

Snipperwall

Apr '16 - Aug '18

Led the front-end development of a tool for aggregating and visualizing social media posts from diverse platforms. This project was strategically focused on enhancing brand engagement. The tool was instrumental in elevating the brand's presence and engagement across multiple social networks.

- React
- Javascript
- Redux
- Styled components

Userzoom

Jan '14 - Apr '16

Assisted in developing a comprehensive dashboard for a platform designed to facilitate the collection of user feedback and insights. This involved integrating various feedback mechanisms such as testing, surveys, audio, and video feedback.

- Javascript
- SASS
- jQuery
- Backbone

Icebergs

Mar '13 - Dec '13

Led the front-end development of a visual organization tool for creative minds, blending elements of Pinterest and Dropbox. This project involved creating a unique platform that catered to the needs of creative professionals, combining idea curation with file storage. Acquired by Pinterest.

- Javascript
- jQuery
- Backbone

Omitsis Consulting

Jun '11 - Feb '13

Developed a dashboard for the creation and management of MICE (Meetings, Incentives, Conferences, and Exhibitions) events.

- Javascript
- jQuery
- PHP
- Symfony

And 2 additional past positions...
